

Software	Feature Name	Difficulty
Mango	Muted by Default	Easy (Est. 1 file; 1 LOC)

**Learning Goals:**

- Perform concept location through an advanced change request
- Perform impact analysis and make technical decisions based on the analysis results
- Practice reverse engineering
- Practice design for usability
- Document software design and analysis

### Current Behavior

By default, a notification sound plays by default when certain events occur, including when a sensor records a new value. This feature can be toggled by clicking the mute button on the right side of the navigation bar.

### Expected Behavior

This feature may become useless and annoying if a large amount of sensors are constantly recording information, so it should be disabled by default. It should not be removed completely, and it should still be possible to enable and disable the notification sound.
